WHAT DESERVES REVIEW

Record ID	Finding	Occurrences
00001	Exact overlap	2
00002	Same ID, differing record	2
R-000	Exact overlap	55

Example: ID **00002** has note **old** in a.csv and **new** in b.csv. That may be an intended update. The report flags the difference; it does not decide which value is correct.

One additional finding: formula-like text is flagged for review. It is treated as text, never executed or repaired.

Detail limit disclosed: all 4 findings are retained, but only 50 of the 55 R-000 source locations are shown. Complete input analysis does not mean every location is listed.

THE HANDOFF

A concise findings summary, machine-readable results and SHA-256 source-file evidence. Source bytes stay unchanged. Values, leading zeros, whitespace and case are compared literally.

$49 / 2-day delivery / 1 correction revision

Up to 2 compatible UTF-8 CSVs; 1,000 total records; 16 columns per file; 100 KiB per file. Diagnostic reporting only: no general cleaning, record correction or financial reconciliation.

If this scope matches your files, use this existing Upwork project to review the requirements and order. Included correction stays within the original scope.

Entirely synthetic data - no customer work, testimonial, payment or income represented. AI-assisted layout and explanation, checked against the synthetic machine output. Hashes establish file identity, not source authenticity or business accuracy.

Selected findings from an existing verified synthetic report. No files are cleaned or merged.
